

2007 positive outcome and new successes predicted for the present year

2007 has been a very important year for Sol3g's industrial and commercial take off. In just three years of life, the company has reached a place in the international photovoltaic market, thanks to its new concentration technology.

The installations, in different power levels, have arrived to Catania (Sicily), Torregrossa (Lleida), Alcobendas (Madrid), Sanlúcar la Mayor (Sevilla) and Cerdanyola del Vallès (Barcelona). Besides, the ISFOC (Instituto de Sistemas Fotovoltaicos de Concentración) has awarded to Sol3g 400kW in Castilla la Mancha.

In financial terms, last year was also successful thanks to a capital expansion. The Sevillian company Abengoa Solar has bet on Sol3g's project after the common work in two 21 kw demonstration installations in Sanlúcar la Mayor.

Sol3g starts the year with a new factory opening in Terrassa (Barcelona). With 800m², it will allow increase the production capacity thanks to the HCPV M40 Module production process industrialization. It plans expand the production ability until 10 MW/year to the end of 2008.

One of the most important year novelties is the Gira-Sol system market introduction. Its development has been finally completed, and now is in trials phase. It is a concentration photovoltaic system designed for flat-roof or ground based sites, perfectly scalable from small to large installations. The launch is planned for June of 2008 in 50 kW installations at least.

The Sol3g growth will continue over 2008 to keep on being a leading company in HCPV systems.

1 kW high concentration system installed in Solúcar (Sevilla).
